

3M Resensitizer Model 764

The Model 764 Resensitizer is a stand-alone on-counter device.

It is used to resensitize 3M Tattle-Tape magnetic strips and markers that have been applied to books, magazines (or other print media) or to compact disks.

The Model 764 is not designed to be used with magnetic media or computer diskettes.

The strips or markers are desensitized before circulation of the print media or disks from a library.

After return, the strips or markers must be resensitized. Properly resensitized strips and markers will set off an alarm when carried through a 3M detection system
